SBM-12

SEMI -MOBILE BATCH PLANT

The SBM-12 is engineered with flexibility at its core.

With a wide range of customization options, you can easily tailor the SBM-12 to meet your exact operational needs. Its innovative design integrates the knee braces of the auxiliary silo directly into the mainframe, allowing your plant to expand and accommodate a second cement silo—even years after the initial purchase.

The SBM-12 also pays attention to the important details that matter during startup, such as convenient scale weight lugs for the scale technician and four (4) couplings at the material collector to support admixtures.
